Web Development Assignment — Project Report

Student Name: Prasad Sudhir Thorat

PRN: 2125UIDM1002

Roll Number: 2026CS001

Department: Integrated B.Tech, Sanjivani University

Date: June 20, 2026

Live Project Link: https://prasadthorat25uid-arch.github.io/DepernmentWebsite_1002/

Structural Summary

The webpage was built as a single, self-contained index.html file using pure HTML5, organized into six clearly delineated sections that mirror the assignment brief. A fixed header introduces the department with an <h1> heading and a short welcome paragraph, followed by a simple navigation bar with anchor links to each section for quick in-page jumping. The Department Overview section uses <h3> subheadings for the Vision and Mission statements, and applies and tags to emphasize key institutional values, alongside a superscript/subscript example (10^2 bytes and H_2O) to satisfy the technical notation requirement.

The Curriculum section pairs an ordered list of the four academic stages with an unordered list of core skills and tools, keeping numbered progression separate from unordered skill sets for clarity. The Faculty Directory uses a semantic <table> with <thead> and <tbody> to present four faculty members across three columns (Name, Designation, Contact Number). The Essential Resources section provides two clearly labeled external hyperlinks, both using target="_blank" (with rel="noopener noreferrer" for security) so students never lose the welcome page. Finally, the Media Gallery embeds a labeled photo of a department computer lab with descriptive alt text, and wraps the department logo in an anchor tag to create a clickable image link back to the main college website. Consistent spacing, a shared color palette, and card-style section containers were used throughout to keep the single page visually organized and easy to scan during a student's first week.

Reflection

Building this page reinforced how much clarity comes from correct semantic nesting: keeping headings hierarchical (h1 → h2 → h3) and closing every tag properly made the page easier to style and debug. The trickiest part was choosing a layout that stayed readable as a single long page rather than feeling cluttered; this was solved with distinct card-style sections, consistent padding, and a clear navigation bar. If extended further, the next improvements would be adding responsive media queries for smaller screens and validating the markup against the W3C HTML validator.

Folder structure used: DepartmentWebsite_2026CS001/ containing index.html, an images/ folder (logo.png, department_view.jpg), and this Report.pdf.
